

# ESD & Cleanroom Monitoring (ACL)

## ACL600 Stati-check Meter

- A unique visual method is provided by this device to detect how much static charge a person is carrying
- Easily wall mounted outside of a sensitive area to provide voltage readings on persons entering and a repetitive read for operators already present in the area
- Detecting the difference in static potential between two people and in determining the effectiveness of wrist straps, coil cords, bonding plugs, custom floors, spray coating, garments, chairs, etc.

## ACL 385 Surface Resistivity Meter

- 'Wide Range' hand held surface resistivity meter. This compact meter measures both surface resistivity and resistance to ground with a test range from  $10^3 \sim 10^{12}$  ohms per square
- CE approved
- Simple repeatable measurements of Conductive, Static Dissipative and insulative surface by the ASTM standard D-257 method of parallel bar sensing

## ACL 750 Combo Tester for Wrist Straps & Heel Grounders

- Used to monitor and analyze wrist straps and heel grounders simultaneously in sensitive work areas
- Comes with easy-to-use software; stores employee test results in the computer for one year
- Meter conform to ISO-9000 requirements
- Accurately measures electrical resistance of wrist straps and heel grounders simultaneously from 500 kilohms to 100 megohms
